

Actimove® Gauntlet

Thumb & Wrist Brace

- **Two metal stays provide good support to thumb and wrist**
- **Allows for full mobility of fingers**
- **Excellent patient comfort and compliance**
- **Washable**

Actimove® Gauntlet

Thumb & Wrist Brace

Actimove® Gauntlet is a functional thumb and wrist support for the treatment of light to moderate injuries or chronic instability problems at the thumb.

Indications

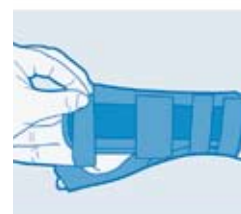

- Tendonitis of thumb (e.g. de Quervain's syndrome)
- Rheumatoid arthritis
- MCP and CMC dislocations of the thumb
- Sprain of the thumb (skier's thumb or goalkeepers thumb)
- Treatment of suspected scaphoid fractures

Product benefits and Design features

- Soft neoprene thumb cover
 - offers good patient fit and comfort
 - allows for good blood circulation
- Pre-shaped and removable metal stays for both wrist and thumb
 - provides excellent support and position for wrist and thumb
 - can be adjusted to suit patient's clinical needs or for improved fit
 - washable brace when stays removed
- Anatomically shaped contour
 - distal brace edge fits under the palmar crease giving free flexion of MCP joints
 - contoured at the ulnar aspect of the hand so there is no squeezing of the MCP's
 - high coverage of dorsal aspect of the hand restricts wrist extension and prevents swelling
 - at the dorsum of the hand

Product application

1. Adjust the shape of the stays that support the wrist and thumb in accordance with anatomical or injury requirements
2. Position hand and thumb over the open splint
3. Secure the hook closure straps as shown in the images
